Simple Inventory Tracker

Project Overview

The Simple Inventory Tracker is an Excel-based project designed to monitor product stock, compare available quantities with reorder levels, and identify items that need replenishment.

Objective

Practice rule-based inventory tracking using spreadsheet formulas and conditional formatting.

Tools Used

Microsoft Excel

Dataset Columns

Column	Description
Product ID	Unique identifier for each product
Product Name	Name of the inventory item
Category	Product group or type
Stock Quantity	Current available stock
Reorder Level	Minimum stock threshold for reordering
Stock Status	Formula-based status: Reorder or In Stock

Formula Used

In cell F3, use: `=IF(D3<=E3,"Reorder","In Stock")`. Fill the formula down through the remaining product rows.

Conditional Formatting

Apply a light red fill to cells in the Stock Status column containing the text "Reorder" so low-stock products are easy to spot.

Low-Stock Report

Use Excel filters on the Stock Status column and select "Reorder" to display only items that need replenishment.

Expected Outcome

A simple inventory sheet that labels products based on stock quantity versus reorder level and helps users identify items that may need restocking.

How to Use

1. Enter product details, stock quantities, and reorder levels.
2. Copy the IF formula down the Stock Status column.
3. Use conditional formatting to highlight reorder items.

4 Filter the Stock Status column to create a low-stock report.

5 Save the workbook as Simple_Inventory_Tracker.xlsx.
